

CanopyChat

ECO-FRIENDLY INTELLIGENCE • ON IPHONE

FOR STUDENTS WHO CARE WHAT THEIR TECH COSTS

Your AI shouldn't cost the planet.

Most chatbots live in **warehouse-size data centers** that burn electricity 24/7 and guzzle water to stay cool. **CanopyChat lives on your phone — just your phone.** No extra warehouses. Private by default.

Just your phone

No data center needed. Chats stay on-device, not on someone else's computer.

No water wasted

Server farms use millions of gallons for cooling. Canopy keeps its cool in your pocket.

Climate-contributing

A percentage of revenue goes to permanent carbon removal via Stripe Climate.

Private by default

History stays on your iPhone unless you choose to share it.
